

**ASSOCIATION OF CANADA LANDS SURVEYORS - BOARD OF EXAMINERS  
WESTERN CANADIAN BOARD OF EXAMINERS FOR LAND SURVEYORS  
ATLANTIC PROVINCES BOARD OF EXAMINERS FOR LAND SURVEYORS**

---

**SCHEDULE I / ITEM 2**

**March 2005**

**LEAST SQUARES ESTIMATION AND DATA ANALYSIS**

**Note: This examination consists of 6 questions on 2 pages.**

**Marks**

**Q. No**

**Time: 3 hours**

**Value   Earned**

1	<p>Define and briefly explain the following terms</p> <ul style="list-style-type: none"> <li>a) Precision</li> <li>b) Accuracy</li> <li>c) Correlation coefficient</li> <li>d) Redundancy of a linear system</li> <li>e) Unbiasedness of an estimator</li> </ul>	10													
2	<p>Given the following mathematical model</p> $f(\ell, x) = 0 \quad C_\ell \quad C_x$ <p>where <math>f</math> is the vector of mathematical model, <math>x</math> is the vector of unknown parameter and <math>C_x</math> is its variance matrix, <math>\ell</math> is the vector of observations and <math>C_\ell</math> is its variance matrix.</p> <ul style="list-style-type: none"> <li>a) Formulate the variation function.</li> <li>b) Derive the least squares normal equation.</li> <li>c) Derive the least squares solution of the unknown parameters.</li> </ul>	15													
3	<p>Given the angle measurements at a station along with their standard deviations:</p> <table border="1" style="margin: 10px auto; border-collapse: collapse;"> <thead> <tr> <th style="text-align: center;">Angle</th> <th style="text-align: center;">Measurement</th> <th style="text-align: center;">Standard Deviation</th> </tr> </thead> <tbody> <tr> <td style="text-align: center;"><math>\alpha</math></td> <td style="text-align: center;"><math>134^\circ 38' 56''</math></td> <td style="text-align: center;"><math>6.7''</math></td> </tr> <tr> <td style="text-align: center;"><math>\beta</math></td> <td style="text-align: center;"><math>83^\circ 17' 35''</math></td> <td style="text-align: center;"><math>9.9''</math></td> </tr> <tr> <td style="text-align: center;"><math>\gamma</math></td> <td style="text-align: center;"><math>142^\circ 03' 14''</math></td> <td style="text-align: center;"><math>4.3''</math></td> </tr> </tbody> </table> <div style="text-align: center; margin: 10px 0;"> </div> <p>Perform least squares adjustment to the problem using</p> <ul style="list-style-type: none"> <li>a) Conditional equations (conditional adjustment)</li> <li>b) Observation equations (parametric adjustment)</li> </ul>	Angle	Measurement	Standard Deviation	$\alpha$	$134^\circ 38' 56''$	$6.7''$	$\beta$	$83^\circ 17' 35''$	$9.9''$	$\gamma$	$142^\circ 03' 14''$	$4.3''$	30	
Angle	Measurement	Standard Deviation													
$\alpha$	$134^\circ 38' 56''$	$6.7''$													
$\beta$	$83^\circ 17' 35''$	$9.9''$													
$\gamma$	$142^\circ 03' 14''$	$4.3''$													

4	<p>Given the variance-covariance matrix of the horizontal coordinates (x, y) of a survey station, determine the semi-major and semi-minor axes and the orientation of the standard error ellipse associated with this station.</p> $C_x = \begin{bmatrix} 0.000532 & 0.000602 \\ 0.000602 & 0.000838 \end{bmatrix} m^2$	10																																				
5	<p>A baseline of calibrated length (<math>\mu</math>) 100.0m is measured 5 times. Each measurement is independent and made with the same precision. The sample mean (<math>\bar{x}</math>) and sample standard deviation (s) are calculated from the measurements:</p> <p style="text-align: center;"><math>\bar{x} = 100.5m</math>                      <math>s = 0.05m</math></p> <p>a) Describe the major steps to test the mean value.</p> <p>b) Test at the 5% level of confidence if the measured distance is significantly different from the calibrated distance.</p> <p>The critical value that might be required in the testing is provided in the following table:</p> <p><b>Percentiles of t distribution</b></p> <table border="1" data-bbox="289 894 1252 1297"> <thead> <tr> <th></th> <th colspan="4"><math>t_\alpha</math></th> </tr> <tr> <th>Degree of freedom</th> <th><math>t_{0.90}</math></th> <th><math>t_{0.95}</math></th> <th><math>t_{0.975}</math></th> <th><math>t_{0.99}</math></th> </tr> </thead> <tbody> <tr> <td>1</td> <td>3.08</td> <td>6.31</td> <td>12.7</td> <td>31.8</td> </tr> <tr> <td>2</td> <td>1.89</td> <td>2.92</td> <td>4.30</td> <td>6.96</td> </tr> <tr> <td>3</td> <td>1.64</td> <td>2.35</td> <td>3.18</td> <td>4.54</td> </tr> <tr> <td>4</td> <td>1.53</td> <td>2.13</td> <td>2.78</td> <td>3.75</td> </tr> <tr> <td>5</td> <td>1.48</td> <td>2.01</td> <td>2.57</td> <td>3.36</td> </tr> </tbody> </table>		$t_\alpha$				Degree of freedom	$t_{0.90}$	$t_{0.95}$	$t_{0.975}$	$t_{0.99}$	1	3.08	6.31	12.7	31.8	2	1.89	2.92	4.30	6.96	3	1.64	2.35	3.18	4.54	4	1.53	2.13	2.78	3.75	5	1.48	2.01	2.57	3.36	20	
	$t_\alpha$																																					
Degree of freedom	$t_{0.90}$	$t_{0.95}$	$t_{0.975}$	$t_{0.99}$																																		
1	3.08	6.31	12.7	31.8																																		
2	1.89	2.92	4.30	6.96																																		
3	1.64	2.35	3.18	4.54																																		
4	1.53	2.13	2.78	3.75																																		
5	1.48	2.01	2.57	3.36																																		
6	<p>Given two distance measurements that are independent and have standard deviations <math>\sigma_1 = 0.20m</math> and <math>\sigma_2 = 0.15m</math>, respectively,</p> <p>a) Calculate the standard deviations of the sum and of the difference of the two measurements.</p> <p>b) Calculate the correlation between the sum and the difference.</p>	15
